STUDIO

Сохраняя традиции - совершенствуем качество

Челябинск

2023-2024

Почему я выбираю гипсовую лепнину?
Потому что убедился в ее преимуществах!

Роскошная коллекция декоративных элементов из высокопрочного гипса гарантирует Вам отличное качество, соблюдение всех линейных размеров, идеальную точность соединения и легкость монтажа при правильном профессиональном подходе.

Гипсовая лепнина - это безупречный в экологическом и техническом отношении естественный материал:

- сохраняет свои свойства много лет;
- пожаробезопасна;
- не выделяет вредных веществ;
- с годами лишь набирает прочность;
- легко реставрируется и хорошо поддается обработке, покраске, декорированию;
- устойчива к колебаниям температур.

Позволяет при правильной разметке поверхностей и изменении толщины клеящей смеси установить лепнину ровно и скрыть таким образом погрешности стен и потолков, что не под силу другим материалам.

В гипсовой лепнине можно воплотить любой замысел художника, дизайнера.

Широкий ассортимент элементов, форм и орнаментов делает гипсовую лепнину незаменимой как для приверженцев современных интерьеров, так и для ценителей классического стиля.

Гипсовая лепнина - это классика, никогда не устареет.
Все встречи на высшем уровне проходят в классических интерьерах с мебелью из настоящего дерева, камня и, безусловно, с настоящей гипсовой лепниной.

Сегодня красота гипсовой лепнины доступна каждому.
Лепные декоративные элементы вдохнут новую жизнь в интерьер, придав им особый шарм, помогут Вам создать ощущение легкости и надежности, уверенности и стабильности.

Гипсовая лепнина - это воплощение любых идей и фантазий,
яркий и неповторимый дизайн интерьера Вашего дома.

Это пример того, как правильная идея воплощена в правильном качественном исполнении.

ИНСТРУКЦИЯ ПО МОНТАЖУ

Рекомендации по установке:

1. Стены, потолок, изделия должны быть сухими и чистыми.
2. Рекомендуется проводить покраску стен и потолков, а также оклейку обоев после монтажа изделий.
3. Необходимо производить расчет количества материала, учитывая потери, возникающие при срезании углов.
4. Работы по установке карниза проводят 2 человека.

Необходимые инструменты:

1. Распиловочный ящик - стусло.
2. Пила или мелкозубчатая ножовка, нож с удобной рукояткой.
3. Рулетка (минимум 3м), кисть средних размеров.
4. Шпатель для нанесения клея, пластмассовый трехлитровый бачок из под клея ПВА.
5. Мелкозернистая шкура (для удаления клея после затвердевания).

Установка карниза:

1. *Подготовьте карниз:*

- срежьте ножом выступающий угол (если есть) с задней стороны по всей длине карниза;
- сделайте ножом насечку сзади карниза;
- смочите клеевой водой всю заднюю часть карниза (с помощью кисти).

2. Точно так же подготовьте все карнизы и положите их на ровное место для высыхания.
3. После подготовки всех карнизов приступают к нанесению отметок на потолке и стенах. Возьмите кусок карниза длиной 20-30см., приставьте его в угол комнаты и сделайте отметки карандашом или ножом на потолке и стене.
4. Сделайте такие же отметки во всех четырех углах комнаты.
5. С помощью хлопчатобумажного шнура или шпагата, обмазанного синькой или цементом, отбейте линии между отметками.
6. Между этими двумя линиями (одна - на потолке, вторая — на стенах) вы будете лепить карниз. Если на потолке или стенах имеется выступ, приставьте туда карниз и проверьте, не выходит ли карниз за линию.
7. Если карниз выходит за одну из линий, то необходимо отбить выступающую часть на потолке или стене, или заново провести линии так, чтобы карниз не выходил за них.
8. После этого приступают к установке карниза (карниз должен быть сухим, сзади карниза из клеевой воды должна образоваться прозрачная пленка).
9. Лепку карниза начинают с угла комнаты. У первого карниза один конец срежьте под углом 45град., второй конец подрежьте ровно и, приставляя его на место установки, проверяйте, как он смотрится.
10. Место, где будет карниз, шпателем очистите от шпаклевки, пыли и т.д., сделайте насечку и смочите водой при помощи кисти.
11. В пластмассовом бачке приготовьте раствор из гипса или фугена средней густоты и налейте его сзади карниза так, чтобы получились 2-3 комка величиной с кулак (расстояние между комками 15-25см).

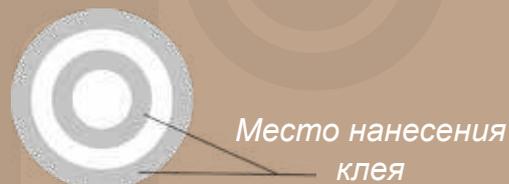

12. Сразу же установите карниз на место так, чтобы он находился точно между 2-х линий, слегка подвигайте его влево - вправо, чтобы выдавить излишки раствора и держите его, пока не схватится раствор(4-5мин).
13. Выдавленный или прилипший раствор сразу уберите ножом или шпателем.
14. Аналогично установите остальные карнизы.
15. Если какой-либо карниз установлен неправильно, либо не выравнивается при установке, сразу же снимите его до схватывания раствора, очистите и установите заново.
16. Будьте осторожны при установке(лепнины) карниза, чтобы не сдвинуть с места предыдущий карниз.

Примечание: Стыки между карнизами до установки должны быть заполнены раствором фугена или шпатлевки, для избежания мелких трещин после покраски.

Установка розетки:

Приклеивание гипсовой розетки к бетонным и оштукатуренным потолкам.

1. Аккуратно приставить розетку к потолку и прочертить контуры розетки.
2. Очистить место приклеивания на потолке (внутри контура) от извести, шпатлевки; на гладких бетонных плитах можно сделать небольшую насечку
3. Приготовить клей ПВА (1 часть клея- 2 части воды) и намазать кисточкой места приклеивания с тыльной стороны розетки и на потолке.
4. Приготовить в банке раствор из фугена или из гипса и налить на смазанные клеем места розетки.
5. Приставить розетку к потолку на место склеивания и легкими движениями из стороны в сторону прижать к потолку.
6. Держать розетку руками до схватывания раствора (10-15 мин).
7. Убрать выделенные излишки раствора ножом или шпателем.
8. Замазать щели между розеткой и потолком гипсовым раствором или шпатлевкой.
